Extensive index permits quick and easy reference to a particular species or topic. 49 illustrations. Bibliography. Index.

## Book Information

Paperback: 260 pages

Publisher: Dover Publications (June 1, 1977)

Language: English

ISBN-10: 0486234703

ISBN-13: 978-0486234700

Product Dimensions: 8.2 x 5.3 x 0.6 inches

Shipping Weight: 10.4 ounces

Average Customer Review: 5.0 out of 5 starsÂ Â See all reviewsÂ (1 customer review)

Best Sellers Rank: #3,289,964 in Books (See Top 100 in Books) #68 inÂ Books > Science & Math > Nature & Ecology > Field Guides > Insects & Spiders #1306 inÂ Books > Science & Math > Biological Sciences > Animals > Insects & Spiders #1339 inÂ Books > Science & Math > Biological Sciences > Biology > Entomology

## Customer Reviews

This book would be perfect for a science project. It describes the unique characteristics of insects in a factual context. For instance, an insect has a compound eye, antenna, 2-3 simple eyes and a 3-part thorax. There are approximately 11 abdominal segments and a characteristic respiratory system. Worldwide, there are approximately 700,000 species of insects. In North America alone, there are 90,000 species. Insects live everywhere on earth. Plant life needs insects. Man needs insects for honey, silk and shellac. Hairy-winged beetles are among the smallest insects. An insect can pull up to twenty times its weight. A locust can fly up to 9 hours continuously. African beetles are the largest insects in the world. Insects have multiple types of antennae. i.e. Plumose, lamellate, setaceous, clavate, pectinate, filiform and aristate. An insect can fly up to 15 MPH. The wings of a mosquito can vibrate up to 1000 times per second. The "Great Moth" has up to 4000 muscles. This work is a goldmine if you have a specific interest in insects.
